(eye-vee plus eye-eye-eye)
minus eye-eye equals eye

How many tendrils of wind swirl out
inside a circle painted on a wall?

It wasn't so long ago that we could **aobxj** our **bpcykq**. We could even, if we worked **qldbqebo**, bring those **bpcykq rm** life. Dancing and music, food and drink, joys and sorrows; we could share these things with one another.

We could **gkyeglc** a world with each other. Now, however, our **bpcykq** are hardened, **zlxibpzba** into **ejyqq**. Not even one of us can soften them so that we can once again bring them **ql ifcb**.

But there is **fmnc**! Though we cannot **obxkfjxqb** our

znawio alone, we can, with your help, **bnlahmd** all of our **znawio**. If enough of these **fkzrrx cqdzlr** fall into the same vessel, they will all come **sn khed wcwej**. We need your help.

We all have **znawio**, just ask us! Gather them and take them to the **iuopey Eqdzl-n-ldsdq**. When we have added enough of our **eqdzlr** to the vessel, these **chwoou znawio** will become **qdzk zfzhm**.

Will it all happen at once? No. But if we can **qdrbtd** our **znawio**, if we can share our **eqdzlr** with one another, we can begin to bring a new world to life.

A number of winged creatures, each with a different head, fly across two wooden doors. Search at the entrance to the chapel. Use the NUMBER of winged creatures.
